

## Pöttinger Aerosem F and Terria Viewing Day

### **New 2021 equipment on show – the Aerosem F and Terria**

On this Friday 4<sup>th</sup> December, Pöttinger and Atkins are staging a viewing day for the new “Aerosem F / Lion” (front hopper one pass system) and Terria (trailed stubble cultivator) at the Atkins Farm Machinery hub in Carrigrohane Road, Cork. With ongoing restrictions, it has not been possible to have open days or open field demonstrations, so we are hosting an invitation only viewing of this Pöttinger equipment.

The Aerosem F is a high volume, pneumatic front hopper seed drill with electric metering. Choose one or two metering units for simultaneous sowing of two different components. Seed mixture components are placed in a single shoot slot. The compact, folding coultter rail with a short headstock puts the centre of gravity close to the tractor

There will be 2 units on display, a 4 meter and a 5 meter, both are front hopper with rear folding power harrow configurations, seed and fertilizer compatible and using double disc coultters.

Also present on the day will be the new “Terria” (trailed stubble cultivator). TERRIA trailed machines cover a wide range of applications in soil cultivation. Perfect ground tracking is a prerequisite for working at the same depth across the whole working width, every square metre of soil is valuable. It is fully versatile to meet the highest expectations.

“One pass systems” with wider working widths are generating a lot of interest in Ireland and with a forecasted increase in grain price we are hitting the market at the right time

Pöttinger and Atkins Subject Matter Experts and support staff will be present on the day between 10am and 5pm.
